## Getting Started

The first step to custom painting is to prepare the surface. This means cleaning the surface thoroughly and removing any dirt, grease, or rust. Once the surface is clean, you need to sand it down to create a smooth surface for the paint to adhere to.

Once the surface is prepared, you can start applying the paint. You can use a brush, roller, or spray gun to apply the paint. If you are using a brush or

roller, be sure to use smooth, even strokes. If you are using a spray gun, be sure to hold the gun perpendicular to the surface and keep it moving back and forth.

Once the paint has been applied, you need to let it dry completely. The drying time will vary depending on the type of paint and the thickness of the coat. Once the paint is dry, you can start applying clear coat. Clear coat will protect the paint from scratches and fading.

## **Tips for Custom Painting**

Here are a few tips for custom painting:

- \* Use high-quality paint and supplies. This will help to ensure that your paint job will last for years to come.
- \* Take your time and prepare the surface properly. This will help to create a smooth and even finish.
- \* Use multiple thin coats of paint instead of one thick coat. This will help to prevent runs and sags.
- \* Let the paint dry completely before applying clear coat. This will help to prevent the clear coat from peeling or chipping.
