Site reliability engineering (SRE) is a specialized field that focuses on the application of engineering principles to the operation of a site. SREs work to ensure that sites are reliable, scalable, and efficient.

Why is Site Reliability Important?

In today's world, businesses rely on their websites to generate revenue, serve customers, and communicate with employees. A reliable site is essential for any business that wants to succeed online.

Even a brief outage can have a significant impact on a business. For example, a study by the Ponemon Institute found that the average cost of a website outage is $5,600 per minute.
